MARCHEL[®]

Hydraulic Pallet Truck

ECO PRO

2.500 kg Capacity, 100 % - Made of stainless steel

It is designed for the food industry and meets all hygiene and ease-of-use requirements.

All components, such as the pump, frame, drawbar, axles, bolts, pins and push rods, are made of stainless steel.

The pallet truck is resistant to most common chemicals, cleaning agents and highly concentrated salt solutions.

The **ECO PRO** model is a lightweight, robust and highly manoeuvrable pallet truck with a small turning radius.

It features a simple and reliable system with a neutral position. The tiller is ergonomically designed and allows for easy operation of the pallet truck.

CE

Marchel Hand Pallet Truck **ECO PRO** in Detail

Drawbar

The release handle is located in the drawbar, which also functions as a pump lever.

The load can be lowered slowly or quickly. A continuously variable lowering speed is possible. After releasing the drawbar, it automatically swivels to the vertical position.

Hydraulic system

The manually operated pump is simple and reliable. The stainless, polished cylinders are resistant to rust, scratches and impacts.

A neutral position valve is standard. This means comfortable handling thanks to load relief on the fork during transport.

Steering wheels

2 nylon wheels, optionally with polyurethane treads.
Ø 180 x 50 mm. Swivel range 220°. Mounting on a tilting axle ensures perfect contact with the road surface at all times.

Load wheels

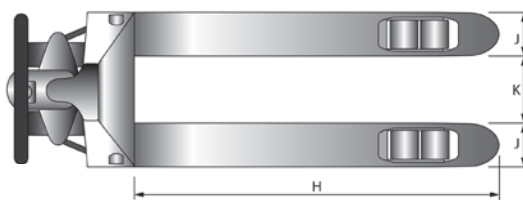

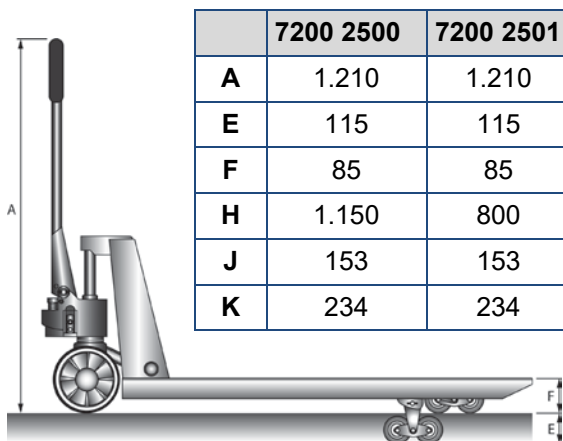

The nylon wheel sets, optionally available with polyurethane treads, are available as single or tandem roller sets.

Weight

64 kg Art.-Nr. 7200 2500
57 kg Art.-Nr. 7200 2501

Capacity

2.500 kg
